#### Description

Low power driver LPD 5-25 is a linear current source with excellent properties for driving low power laser diodes. Current waveforms can be CW, pulsed, modulated or a combination with frequencies up to 50 kHz (square wave) and currents up to 5 A. An analog modulation input and a digital enable / trigger input can generate fast and clean pulses. An analog input and a potentiometer control the current set point. Both values are added and build the effective current set point. LPD 5-25 is small and compact and can be operated without heatsink ( $P_{DISS} < 5 \text{ W}$ ). A temperature-controlled air fan cooler (heatsink) is available for  $P_{DISS}$  up to 25W. An integrated overtemperature protection increases operating safety.

Technical subjects to change without notice.
