

QS (QuickSwitch®) Evaluation Board QS-EVAL Driver 3

Description

This is the evaluation board for the QS905D1S3JTXU pulsed lasers. The board has an internal short pulse generator, allowing direct drive from a square wave generator. The board has a socket for easy QS905D1S3JTXU installation.

Features

- TO-56, 5 pins socket
- Variable output power depending of HV input selection.
- Firing rate up to 80 kHz (w/o heatsink)

Applications

- Range finding
- Laser radar / LIDAR
- Ceilometer
- Medical
- Optical trigger

Specifications for QS-EVAL Driver 3

V_+ , input voltage	8.0	V
V_{TrigLOW}	< 0.8	V
V_{TrigHIGH}	$2.0 < V < 3.3$	V
R_{Trig} internal termination	50	Ohms
T_D turn on delay (trigger to laser pulse)	15	ns

TO-56 Socket Pinout

Pin 1	Gate
Pin 2	Gnd
Pin 3	HV (high voltage; 20 – 80 VDC)
Pin 4	Gnd
Pin 5	Case (connected to Gnd)

Electrical Interface

25 mm x 51 mm QuickSwitch® Evaluation Board

Note:

Please consult „PIN Configuration“ for details of 8-pin connector pin-out.

PIN Configuration

Pin	Function	Comment
J1 (see note) 1 3, 5 7 2, 4, 6, 8	HV NC V+ GND	20 V – 80 V DC, HV input TP1 and TP2 (spares) supply input, 8 V DC min, 12 V DC max ground pins
J2 (SMB)	TRIG	TRIG IN – internally terminated into 50 Ω
J3 (SMB)	MON	TRIG OUT/MON – see note

Note:

J1 Connector is Amphenol PV® part number: 69168-108HLF, while adapter is part number: 65846-016LF

J3, HV Mon is only available for repetition rate < 20 KHz and should then be loaded by 50 ohms.

It should be kept open if not used.

Negative pulse when laser fires: with 3 ns fall time followed by 700 ns rise time

Operating Procedure and Recommendations:

- Connect trigger source to J2 (leave J3 unpopulated).
- Ensure trigger pulse has a minimum of 2.0 V for the high side and a maximum of 0.8 V for the low side (pulse width is open to user choice).
- Once trigger is set, connect V+ (8 – 12 V) to pin 7, and HV to pin 1 (make sure HV is above 13 V to avoid reverse biasing, the correct range should be 20 – 80 V).
- Insert the QuickSwitch laser to the socket and set power supplies to the correct voltages.
- Once everything is set, turn on the V+ (8 – 12 V) trigger first, and then the HV input (20 – 80 V): initially at the lower value of HV, but always above 13 V.
- If the oscilloscope and optical detector are configured for very short pulses, then the output pulses of the QuickSwitch laser should be detectable.
